

## Quick Start Setup:

1. To get the openrouter api key go to <https://openrouter.ai/settings/keys>
2. Get perplexity.ai to get api key: <https://www.perplexity.ai/settings/api>
3. In the Perplexity API node, in the "Header Auth" drop down, select **-Create New Credentials-**

The screenshot shows the configuration panel for a 'Perplexity API' node. The 'Parameters' tab is active. The 'Method' is set to 'POST'. The 'URL' is 'https://openrouter.ai/api/v1/chat/completions'. Under 'Authentication', 'Generic Credential Type' is selected, and 'Generic Auth Type' is set to 'Header Auth'. The 'Header Auth' field contains the value 'perplex'. The 'Send Query Parameters' and 'Send Headers' toggles are off, while 'Send Body' is on. 'Body Content Type' is set to 'JSON', and 'Specify Body' is set to 'Using JSON'. A JSON body is partially visible at the bottom: { "model": "perplexity/llama-3.1-sonar-large-128k-online", "messages": [ ... ] }. To the right of the configuration panel is an 'OUTPUT' section with a 'Test step' button at the top and a 'Docs' link. Below the configuration panel, there is a hint: 'I wish this node would...'.

4. In the credentials,  
**Name field:** Authorization  
**Value field:** Bearer <perplexity.ai key>

Don't enter the < > characters, just the key value. For example:

Bearer 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

5. Download Hot Topics Google Sheetsr: [Hot Topics](#)
6. Change gmail node to send to: email address

## To setup Reddit node:

1. Go to <https://old.reddit.com/prefs/apps/> to create a reddit app

### create application

By creating an app, you agree to [Reddit's Developer Terms](#) and [Data Api Terms](#). You must also [register](#) to use the API.

**name**

☒ **web app** A web based application  
☐ **installed app** An app intended for installation, such as on a mobile phone  
☐ **script** Script for personal use. Will only have access to the developers accounts

**description**

**about url**

**redirect uri**

☐ I'm not a robot  reCAPTCHA  
Privacy - Terms

For the redirect url, just copy from the OAuth Redirect URL

Reddit account Save ×  
Reddit OAuth2 API

section Need help filling out these fields? [Open docs](#)

ring **OAuth Redirect URL**

ails   
In Reddit, use the URL above when prompted to enter an OAuth callback or redirect URL

Client ID \*

Client Secret \*

Enterprise plan users can pull in credentials from external vaults. [More info](#)

2. Once the app is created, copy the **web app** id (this is the client id) and copy the secret and input into the client secret field
